Introduction

The practice of medico-scientific knowledge is an essential component of medicine, involving the use of evidence-based practices. However, there are significant challenges and biases in the current medical practice, including a lack of recognition of patient autonomy, a focus on disease rather than health, and a failure to address social determinants of health. The Canadian Medical Association (CMA) has called for a national approach to licensing and regulation of medical practice, which includes a greater focus on public health and a recognition of the role of medicine in promoting health equity.

Society's role in health care

Society has a critical role in the provision of health care. It is essential to ensure that health care is delivered in a manner that is respectful, accessible, and equitable. This includes addressing the social determinants of health, such as poverty, racism, and discrimination, which can have a significant impact on health outcomes.

Policy

The CMA supports the decriminalization of drug use and possession for personal use. This is consistent with the principles of public health, which emphasize the importance of promoting health equity and ensuring that all members of society have access to health care. The decriminalization of drug use and possession for personal use is a step towards ensuring that all members of society have access to health care.

Conclusion

The decriminalization of drug use and possession for personal use is a step towards ensuring that all members of society have access to health care. It is essential to ensure that health care is delivered in a manner that is respectful, accessible, and equitable. This includes addressing the social determinants of health, such as poverty, racism, and discrimination, which can have a significant impact on health outcomes.

[Image of report cover]

This report describes the national standards for Long-Term Care (LTC) in Canada, addressing the issue of 10% of Canada's long-term care residents living in LTC facilities. The report highlights the challenges faced by LTC residents and identifies areas for improvement. It advocates for a comprehensive approach to LTC that addresses not only physical health but also social and emotional needs. The report calls for increased funding, better training for staff, and improved access to healthcare services. It also emphasizes the importance of engaging residents and their families in decision-making processes. The report concludes with recommendations for policy makers to implement these standards across the country.
