Disclosure of COVID-19 Vaccination Status by Physicians

In the context of COVID-19 vaccination, physicians may wish to disclose their vaccination status to patients, particularly concerning broader public health and personal medical decisions. The Canadian Medical Association (CMA) supports physicians in their role as advocates for their patients and for public health. The following recommendations provide guidance on how to communicate vaccination status.

1. **Disclosure of Vaccination Status:** Physicians should disclose their vaccination status to patients in a manner that is clear and understandable. This can help build trust and address any concerns patients may have regarding vaccination safety or efficacy. The disclosure should be provided in a manner that respects patient confidentiality and privacy.

2. **Contextual Information:** Physicians may choose to provide additional information about the benefits and risks of vaccination, including the role of vaccination in controlling the spread of COVID-19 and its impact on public health. This can help patients make informed decisions about their health.

3. **Sensitive Information:** Physicians should be sensitive to the potential for discrimination or stigma associated with vaccination status. It is important to communicate in a way that minimizes any negative perceptions or reactions.

4. **Confidentiality:** While disclosure of vaccination status is important, it is crucial to maintain patient confidentiality. Information should be shared only with the consent of the patient or as required by law for public health purposes.

5. **Continued Education:** Physicians should remain informed about the evolving landscape of COVID-19 vaccination, including changes in vaccine composition, dosage, and safety, to provide accurate and up-to-date information to their patients.

6. **Risk Management:** Physicians may consider implementing risk management strategies to address any issues that may arise from disclosing vaccination status. This could include providing patients with a written statement summarizing the information, or offering additional information through electronic or written resources.

By following these recommendations, physicians can help ensure that patients have access to accurate and timely information about COVID-19 vaccination, while maintaining the trust and confidence that are essential to the provision of high-quality care.
