CMA POLICY

ACHIEVING PATIENT-CENTRED COLLABORATIVE CARE

The Canadian Medical Association (CMA) recognizes the importance of a patient-centred approach to health care delivery. Patient-centred care involves the active and informed participation of patients in decision-making about their health care. It also includes the development of strong, collaborative relationships between patients and their health care providers. This approach is essential to achieving high-quality care and improving patient outcomes.

The CMA supports patient-centred care as a means of enhancing the health system's ability to meet the needs of patients. To achieve this, the CMA recommends the following strategies:

- Establishing clear and effective communication between patients and health care providers
- Providing access to comprehensive patient information
- Facilitating patient involvement in decision-making processes
- Promoting shared decision-making
- Supporting patient self-management

Taken together, these strategies can help ensure that patients are fully engaged in their care, resulting in better outcomes and increased patient satisfaction.

Strategies for Collaborative Care

The CMA encourages health care providers to adopt a patient-centred approach to care. This involves taking into account the patient's preferences, values, and goals in the decision-making process. To achieve this, providers should:

- Engage patients in the development of their care plan
- Provide clear and understandable information
- Support patients in managing their health
- Encourage patients to ask questions and express concerns
- Provide ongoing support and follow-up

By implementing these strategies, health care providers can improve the quality and effectiveness of patient care, leading to better outcomes and increased patient satisfaction.

Answering the Wake-up Call: CMA’s Public Health Action Plan

CMAs Public Health Action Plan

Submission to the National Advisory Committee on SARS and Public Health
June 2003

Executive Summary

The public health community faces a critical challenge: to deliver the same level of care to all Canadians, to ensure that everyone has access to the best possible health care, and to improve the health status of all Canadians. This requires a fundamental shift in thinking and action, and the CMA is committed to working with all stakeholders to achieve these goals.

The CMA strongly supports the development of a national health information strategy that will improve public health surveillance and response to infectious diseases. This will require the creation of a robust system for collecting, analyzing, and disseminating data on health outcomes and risk factors across the country.

In addition, the CMA is committed to promoting health equity, which is essential for achieving optimal health outcomes for all Canadians. This requires addressing the social determinants of health, including income, education, and access to health care services.

The CMA also recommends that public health agencies be funded on a sustainable basis, with adequate resources allocated to core functions such as surveillance, prevention, and response to infectious diseases.

Finally, the CMA supports the development of a national framework for public health governance, with clear roles and responsibilities for all levels of government, and a focus on collaboration and integration of resources and services.
