We are writing to you with recommendations for responding to the ongoing effects of COVID-19 and to improve long-term care for Ontarians.

In a recent CMA journal article, "Ongoing COVID-19 Pandemic Response: The Role of the Canadian Medical Association in Supporting Long-Term Care and Acute Care Settings," we highlighted the critical role of long-term care in responding to COVID-19. We emphasized the importance of recognizing the unique challenges faced by residents and staff in long-term care facilities, and the need for ongoing support and resources.

The COVID-19 pandemic has highlighted the importance of strong community and healthcare partnerships. We recommend the following actions to improve long-term care in Ontario:

1. Enhance the support systems for long-term care facilities:
   - Increase funding for personal support workers and allied health professionals
   - Implement a comprehensive infection prevention and control plan
   - Provide ongoing training and education for staff

2. Improve access to healthcare services:
   - Expand primary care services in long-term care facilities
   - Increase access to mental health services for residents

3. Strengthen the supply chain for personal protective equipment (PPE):
   - Ensure adequate PPE stock for all long-term care facilities
   - Establish a centralized PPE distribution system

We look forward to hearing from you and working together to improve long-term care for Ontarians.

Sincerely,

[Redacted]

Mr. Lawrence Cannon, M.P.
Chair, Legislative Committee on Bill C-30
House of Commons
Ottawa, Ontario K1A 0A6

Dear Mr. Cannon,

The Canadian Medical Association (CMA) is pleased to participate in the review of the Clean Air Act, 2006. CMA, the oldest professional association in Canada, represents over 60,000 physicians across the country. We are the highest elected voice of the health care system in Canada and are committed to keeping our patients healthy.

The Environment and Public Health

The physical environment is the determinant of a population’s health and the medical profession has a responsibility to promote the health of Canadians by advocating policies and practices that contribute to the health of all Canadians. This includes policies that aim to protect and improve the quality of the environment.

There is strong evidence that pollution is a cost and burden on our communities. It is clear that the health care system is a significant cost in our country. We believe that sustainable health care requires sustainable environment.

We support the federal government’s goal of 1,200 permanent deaths per year from cardiovascular disease due to air pollution.

In 2008, a study published in the journal Health and Place found that pollution is a major contributor to cardiovascular disease. The study looked at the relationship between air pollution and cardiovascular disease in Canada and found that pollution is a significant factor.

We believe that the government’s goal of reducing air pollution is important and should be pursued.

Sincerely,

[Signature]
