IMPROVING EFFICIENCY IN THE CANADIAN HEALTH CARE SYSTEM

Achieving system health care is an important objective for all Canadians. Health care systems in Canada are complex and their performance is influenced by a variety of factors. While there are many factors that contribute to the performance of health care systems, this document focuses on three key areas: efficiency, effectiveness, and equity.

1. Introduction

Health care systems in Canada and elsewhere are becoming increasingly complex, with new demands on resources and increased expectations for quality and effectiveness. The concept of efficiency in health care has been described in various ways, but it generally refers to the ability of a system to achieve its objectives using the least possible resources. Efficiency is a critical element in ensuring that health care systems are sustainable and meet the needs of all Canadians.

This document presents principles and strategies to improve the efficiency of the Canadian health care system. These principles are based on an extensive review of the literature and consultation with experts in the field. The principles are designed to be flexible and adaptable to the unique circumstances of each health care system.
