CMA Statement on the Governance of Health Information: A patient-partnered health information governance framework
https://policybase.cma.ca/link/policy14485

WHAT IT IS

The purpose of this statement is to advance the development of a patient-partnered health information governance framework to support meaningful integration of health information management with a patient-centered health system. Our architecture for this new approach to health information governance is based on several key principles:

1. The patient is the central focus of care and is the key driver of information management decisions.
2. The patient is an active participant in the management and sharing of their health information.
3. The patient is supported by health information professionals, who are responsible for ensuring the safe and ethical management of health information.
4. The patient is empowered to make informed decisions about their health information.

The framework is supported by a comprehensive governance structure that includes patient representatives, health information management professionals, and other stakeholders. This governance structure ensures that the patient’s interests are protected and that the management of health information is aligned with patient needs and values.

WHAT IT MEANS

The implementation of this framework will enable the patient to have greater control over their health information, which will result in improved health outcomes and a more patient-centered approach to health care.
