The Canadian Medical Association (CMA) believes that collaboration and a coordinated approach to health care delivery are essential to improving the quality and efficiency of health care services. The enhanced collaboration among health care providers and the management of complex chronic conditions is critical to achieving patient-centred care.

The relationship among physicians, patients and the public is a fundamental aspect of health care delivery. Effective communication and patient education are key elements in achieving patient-centred care.

The relationship among physicians, patients and the public is a fundamental aspect of health care delivery. Effective communication and patient education are key elements in achieving patient-centred care.

Answering the Wake-up Call
CMA’s Public Health Action Plan

CMA submission to the National Advisory Committee on SARS and Public Health

June 25, 2003

EXECUTIVE SUMMARY
The public health system in Canada is a critical component of our community health. It is the responsibility of the provinces and territories to deliver public health services. The Canadian Medical Association (CMA) recognizes the importance of the public health system and the need for its continued support and funding. CMA supports the development of a national framework for public health, which includes the following key principles:

1. The public health system should be based on a population health approach.
2. The public health system should be comprehensive and holistic, addressing the social, economic, and environmental determinants of health.
3. The public health system should be adequately funded and resourced.
4. The public health system should be accountable and responsive to the needs of the communities it serves.

In conclusion, CMA recommends that the federal government take a leading role in the development of a national public health strategy and that provinces and territories be provided with the resources and support they need to strengthen their public health systems.
