Answering the Wake-up Call: CMA’s Public Health Action Plan

Submission to the National Advisory Committee on SARS and Public Health

June 2003

EXECUTIVE SUMMARY

The public health systems in Canada are the backbone of our community. They are the unsung heroes who are often cited in the media, but are rarely celebrated for the work they do. The public health system is a network of organizations, agencies, and individuals who work together to promote health, prevent disease, and protect the public from threats to their health.

Infectious disease outbreaks, such as the SARS outbreak, are an example of how the public health system comes into play. Public health officials work with hospitals, clinics, and other health care providers to identify and control the spread of disease. They also provide information to the public about how to prevent the spread of disease.

The public health system in Canada is a complex network of organizations and agencies. It is important that all levels of government, including federal, provincial, and municipal, work together to ensure that the system is effective.

The federal government has a role to play in supporting the public health system. This includes providing funding for public health programs, and working with provinces and territories to ensure that they have the resources they need to provide effective public health services.

The provincial and territorial governments are responsible for providing public health services within their jurisdiction. They have a duty to ensure that their public health systems are effective and efficient.

The municipal government is also an important partner in the public health system. Municipalities are responsible for providing public health services within their communities.

The public health system is a vital part of our community. It is important that all levels of government work together to ensure that it is effective and efficient.
