Volume 1

Vaccine certificates

Policy position recommendation

1. The Canadian Medical Association believes that the provision of vaccine certificates is a public health measure that should be part of a broader public health strategy to control the spread of COVID-19. Vaccine certificates should be provided to individuals who have been fully vaccinated against COVID-19, as defined by the Public Health Agency of Canada. The provision of vaccine certificates should be voluntary and should not be used as a form of discrimination.
2. The Canadian Medical Association supports the use of digital vaccine certificates that are secure and cannot be falsified. Digital vaccine certificates should be tamper-proof and should be verified by reputable organizations. The Canadian Medical Association calls on governments to support the development of secure and reliable digital vaccine certificate systems.
3. The Canadian Medical Association encourages health care providers to be vigilant in providing accurate and reliable information to patients about vaccine certificates. Health care providers should ensure that patients understand the benefits and limitations of vaccine certificates and the role they play in protecting public health.
