Vaccine certificates
https://policybase.cma.ca/link/policy14448

Policy position recommendation

1. Vaccine certificates should be aligned with public health measures and policies. Vaccine certificates are an effective tool in incentivizing vaccination and ensuring that individuals are aware of their vaccination status. They can be used to promote public health messages and encourage vaccination. Additionally, vaccine certificates can be used in conjunction with other public health measures, such as mask mandates and social distancing, to control the spread of infectious diseases.

2. Vaccine certificates should be obtained through a voluntary, informed consent process. Individuals should be provided with accurate information about the benefits and risks of vaccination, as well as the potential impact of vaccine certificates on public health outcomes. The process should be transparent and accessible to all individuals.

3. Vaccine certificates should be accessible to all individuals, regardless of their ability to pay. Efforts should be made to ensure that vaccine certificates are available to individuals from underserved and marginalized communities, who may have limited access to information and resources.

4. Vaccine certificates should be used in conjunction with other public health measures to control the spread of infectious diseases. This includes monitoring the effectiveness of vaccine certificates in controlling the spread of infectious diseases and adjusting public health policies accordingly.

5. Vaccine certificates should be used in conjunction with other public health measures to control the spread of infectious diseases. This includes monitoring the effectiveness of vaccine certificates in controlling the spread of infectious diseases and adjusting public health policies accordingly.

6. Vaccine certificates should be used in conjunction with other public health measures to control the spread of infectious diseases. This includes monitoring the effectiveness of vaccine certificates in controlling the spread of infectious diseases and adjusting public health policies accordingly.

7. Vaccine certificates should be used in conjunction with other public health measures to control the spread of infectious diseases. This includes monitoring the effectiveness of vaccine certificates in controlling the spread of infectious diseases and adjusting public health policies accordingly.

8. Vaccine certificates should be used in conjunction with other public health measures to control the spread of infectious diseases. This includes monitoring the effectiveness of vaccine certificates in controlling the spread of infectious diseases and adjusting public health policies accordingly.

9. Vaccine certificates should be used in conjunction with other public health measures to control the spread of infectious diseases. This includes monitoring the effectiveness of vaccine certificates in controlling the spread of infectious diseases and adjusting public health policies accordingly.

10. Vaccine certificates should be used in conjunction with other public health measures to control the spread of infectious diseases. This includes monitoring the effectiveness of vaccine certificates in controlling the spread of infectious diseases and adjusting public health policies accordingly.
