ORGAN AND TISSUE DONATION AND TRANSPLANTATION

ORGAN AND TISSUE DONATION AND TRANSPLANTATION

BACKGROUND TO CMA POLICY

Organ donation and transplantation (ODT) is a highly regulated process involving consent and organ procurement at the point of brain death and the subsequent donation and transplantation of donor organs and tissues. This policy outlines CMA’s position on the ethical, medical and professional considerations related to organ and tissue donation and transplantation.

The practice of organ donation and transplantation is guided by ethical principles which require that the consent of the potential donor is obtained, that the donor remains anonymous, and that the recipient is not unduly favored over other eligible candidates. These principles are enshrined in the Canadian Organ移植 Act and the Canadian Organ Transplant Network.

The policy also emphasizes the importance of maintaining public trust in the system and ensuring that ethical considerations are not compromised by the pressures of supply and demand.

The policy also outlines the responsibilities of healthcare providers in the context of organ donation and transplantation, including the importance of education and training, and the need for ongoing evaluation of practices and policies.
