CMA Statement on the Governance of Health Information: A patient-partnered health information governance framework

https://policybase.cma.ca/link/policy14485

WHAT IT IS

The purpose of this statement is to underscore the need for the development of a patient-partnered health information governance framework that ensures the health information governance framework is in place. The framework should be designed to support the delivery of high-quality, patient-centered care, and to ensure that stakeholders, including patients, health care providers, and organizations, are involved in the decision-making process.

1. Develop a governance framework that supports the delivery of high-quality patient-centered care.
2. Ensure that stakeholders, including patients, health care providers, and organizations, are involved in the decision-making process.

The framework should be designed to support the delivery of high-quality, patient-centered care, and to ensure that stakeholders, including patients, health care providers, and organizations, are involved in the decision-making process.

It is recommended that the framework be developed in consultation with a variety of stakeholders, including patients, health care providers, and organizations, and that the framework be reviewed on a regular basis to ensure that it remains relevant and effective.

The Honourable Donna Harpauer,
Leader of the Saskatchewan New Democratic Party;

Dear Minister Legault and Honourable Members of the Council of the Federation,

I am writing on behalf of the Canadian Medical Association (CMA) to express our support for a robust and well-coordinated Canada-wide Canada-wide health system that adequately funds the health system to ensure it can deliver high-quality care to all Canadians.

The CMA has long advocated for a strong, integrated and adequately funded health system that is able to deliver high-quality care to all Canadians. We believe that a well-funded health system is essential to ensuring that Canadians have access to the care they need, when they need it.

Our position is supported by a number of studies and reports, including a recent study by the Canadian Institute for Health Information (CIHI) which found that Canada spends less on health care per capita than most other OECD countries, and that our health care system is struggling to meet the needs of Canadians.

We urge the Council of the Federation to prioritize funding for the health system in order to ensure that it can meet the needs of Canadians and provide high-quality care.

Sincerely,

[Signature]

Guiding Principles for the Optimal Use of Data Analytics by Physicians at the Point of Care

Executive Summary

Data analytics are now being used more widely in medicine. Physicians, in particular, are increasingly using data analytics to inform their practice and research. In the context of health care, analytics can provide physicians with valuable insights into patient care and outcomes, which can help to improve patient outcomes and the efficiency of health care delivery. However, data analytics can also pose challenges, such as concerns about privacy and security, and the need for appropriate training and education for physicians. To address these challenges, the Canadian Medical Association (CMA) has developed the following guiding principles for the optimal use of data analytics by physicians at the point of care:

1. Data analytics should be used to improve patient care and outcomes. This includes identifying patterns and trends that can help to inform treatment decisions and improve patient outcomes.
2. Data analytics should be used to support research and innovation. This includes using data analytics to inform the development of new treatments and technologies.
3. Data analytics should be used to support public health and policy-making. This includes using data analytics to inform the development of public health policies and strategies.

These principles are intended to provide guidance to physicians and their organizations on how to use data analytics in a responsible and ethical manner. They are not intended to be exhaustive, but rather to provide a starting point for discussions on this important topic.
