Mandatory COVID-19 vaccination of health care workers

Policy document

DATE
2021-08-21

TOPICS
Health human resources
Population health, health equity, public health

Facts and recommendations:
1. All health care workers should be fully vaccinated for COVID-19 upon return to work.
2. Lessons learned from previous public health campaigns include the following:
   a. Clear and concise communication
   b. Transparency and accountability of public health authorities
   c. Consistent and evidence-based guidance
3. The mandatory vaccination of health care workers is an effective way to protect patient and health care workers from COVID-19. Health care workers have a responsibility to protect themselves and their patients.
4. The mandatory vaccination of health care workers is a cost-effective way to protect the health care system.
5. The mandatory vaccination of health care workers is a public health measure that can help to protect the health of the population.

The Standing Committee on Health’s study on violence faced by healthcare workers

The study examines the prevalence of violence faced by healthcare workers in Canada, with a focus on the role of physicians in preventing and addressing workplace violence. The study highlights the need for policies that support the mental health and well-being of healthcare workers, as well as for better training and education to prevent workplace violence.

The study also calls for stronger enforcement of existing workplace violence policies, as well as for the development of new policies to address the unique challenges faced by healthcare workers in preventing and responding to workplace violence.

The study recommends the following actions:

1. The development of a national framework for the prevention and response to workplace violence in healthcare settings.
2. The creation of a national registry of workplace violence incidents in healthcare settings.
3. The provision of ongoing education and training for healthcare workers on preventing and responding to workplace violence.
4. The implementation of policies that support the mental health and well-being of healthcare workers.

The study recommends that these actions be taken at the national level, with the cooperation of provincial and territorial governments, and that the Canadian Medical Association (CMA) work closely with healthcare organizations and workers to implement these recommendations.

Appendix

The appendix contains a list of references, as well as a summary of the key findings and recommendations of the study.

Comments on Bill C-6
(Personal Information Protection and Electronic Documents Act)

Submission to the Senate Standing Committee on Social Affairs, Science and Technology

Nov. 27 1999

Dr. E. J. B. Sheehan

Canadian Medical Association

Executive Summary

The Canadian Medical Association, in its recent submission to the House of Commons, had previously expressed its concerns about the provisions of Bill C-6. These concerns were based on the belief that the bill, as currently drafted, does not adequately protect the rights of patients to control their personal information.

The CMA has also been concerned about the potential for the provisions of Bill C-6 to be overly broad and to infringe upon the rights of patients to control their personal information. The CMA has recommended that the bill be amended to ensure that the rights of patients are protected and that the provisions of the bill are consistent with the principles of informed consent and patient confidentiality.

In conclusion, the CMA believes that the provisions of Bill C-6 should be amended to ensure that the rights of patients to control their personal information are protected and that the provisions of the bill are consistent with the principles of informed consent and patient confidentiality.

The CMA is committed to ensuring that the rights of patients are protected and that the provisions of Bill C-6 are consistent with the principles of informed consent and patient confidentiality.
