Mandatory COVID-19 vaccination of health care workers

Policy position recommendation:

1. All health care workers should be fully vaccinated for COVID-19 on an ongoing basis. Their families, communities, and health care settings.
2. Arts to support the provincial/territorial COVID-19 vaccine and health care workforce planning. This includes vaccine programs, health human resources, health care planning, and health care human resource planning in environments with a high risk of transmission.
3. In addition, it is recommended that all health care workers be fully vaccinated for COVID-19 on an ongoing basis. Their families, communities, and health care settings.
4. Arts to support the provincial/territorial COVID-19 vaccine and health care workforce planning. This includes vaccine programs, health human resources, health care planning, and health care human resource planning in environments with a high risk of transmission.
5. In addition, it is recommended that all health care workers be fully vaccinated for COVID-19 on an ongoing basis. Their families, communities, and health care settings.
6. Arts to support the provincial/territorial COVID-19 vaccine and health care workforce planning. This includes vaccine programs, health human resources, health care planning, and health care human resource planning in environments with a high risk of transmission.
7. In addition, it is recommended that all health care workers be fully vaccinated for COVID-19 on an ongoing basis. Their families, communities, and health care settings.
8. Arts to support the provincial/territorial COVID-19 vaccine and health care workforce planning. This includes vaccine programs, health human resources, health care planning, and health care human resource planning in environments with a high risk of transmission.
9. In addition, it is recommended that all health care workers be fully vaccinated for COVID-19 on an ongoing basis. Their families, communities, and health care settings.
10. Arts to support the provincial/territorial COVID-19 vaccine and health care workforce planning. This includes vaccine programs, health human resources, health care planning, and health care human resource planning in environments with a high risk of transmission.

Interchangeability of vaccines (vaccine mixing)

Policy position/recommendation:

1. The CMA supports the recommendation issued by the National Advisory Committee on Immunization (NACI) regarding the interchangeability of COVID-19 vaccines. It is also prudent to ensure that vaccine interchangeability, including interchangeability of COVID-19 vaccines, is based on the best-available evidence and up-to-date data.

2. The CMA recommends that, whenever possible, vaccines be administered within a single administration setting to ensure that public health measures are not compromised.

3. The CMA supports the use of vaccines for the prevention of COVID-19, consistent with the recommendations of the NACI.

Interchangeability of vaccines

Interchangeability of vaccines is defined as the ability to substitute one vaccine for another without changing the efficacy of the vaccine or the risk of adverse events. The interchangeability of vaccines may be influenced by factors such as the timing of the dose, the use of concomitant medications, and the presence of other health conditions.

Interchangeability of vaccines and pandemic planning

In the context of pandemic planning, the interchangeability of vaccines is an important consideration. It is essential to ensure that vaccines can be administered in a timely manner to prevent the spread of the disease. The interchangeability of vaccines may also be influenced by the availability of vaccines, the timing of the outbreak, and the need for rapid response.

Interchangeability of vaccines and public health

The interchangeability of vaccines is a key component of public health strategies. It is important to ensure that vaccines are administered in a timely manner to prevent the spread of the disease. The interchangeability of vaccines may also be influenced by the availability of vaccines, the timing of the outbreak, and the need for rapid response.

Interchangeability of vaccines and international travel

The interchangeability of vaccines is an important consideration for international travelers. It is important to ensure that vaccines can be administered in a timely manner to prevent the spread of the disease. The interchangeability of vaccines may also be influenced by the availability of vaccines, the timing of the outbreak, and the need for rapid response.

Interchangeability of vaccines and vaccination programs

The interchangeability of vaccines is an important consideration for vaccination programs. It is essential to ensure that vaccines can be administered in a timely manner to prevent the spread of the disease. The interchangeability of vaccines may also be influenced by the availability of vaccines, the timing of the outbreak, and the need for rapid response.
