CMA Statement on the Governance of Health Information: A patient-partnered health information governance framework

https://policybase.cma.ca/link/policy14485

POLICY TYPE: Policy document
DATE: 2022-06-29
TOPICS: Health information and e-health

WHAT IT IS

The purpose of this statement is to establish the development of a patient-partnered health information governance framework that aligns with the Canadian Medical Association’s (CMA) policy on patient-partnered health information governance. This framework is intended to provide a clear, comprehensive, and actionable approach to the governance of health information in Canada. It is designed to ensure that health information is managed in a way that respects patient privacy, promotes health outcomes, and supports the ethical use of health data. The framework aims to foster collaboration between healthcare providers, patients, and stakeholders to create a sustainable, patient-centered approach to health information governance.

WHAT IT DOES

The framework is based on the principles of patient-partnered governance and includes the following components:

1. **Patient Engagement**: Engaging patients in the governance of their health information is essential. Patients should have access to their health information, be able to share it with others, and be involved in decisions about its use.
2. **Data Stewardship**: Designating data stewards is crucial to ensure that health information is managed ethically and effectively. Stewards should be responsible for ensuring that data is used in ways that promote health outcomes and respect patient privacy.
3. **Ethical Considerations**: Incorporating ethical considerations is necessary to ensure that health information is used responsibly and in accordance with ethical principles.
4. **Privacy Protections**: Implementing strong privacy protections is vital to ensure that patient health information is safeguarded and used only for legitimate purposes.
5. **Continuous Improvement**: The framework should be designed to be adaptable and continuously improved based on feedback and evolving needs.

WHY IT MATTERS

Health information is a critical resource that can be used to improve patient care and public health. However, the proper governance of health information is essential to ensure that it is used ethically and effectively. This framework provides a clear, comprehensive, and actionable approach to the governance of health information in Canada, ensuring that patient privacy is respected and that health outcomes are supported.

HOW TO IMPLEMENT

Implementing this framework requires collaboration between healthcare providers, patients, and stakeholders. It is important to involve all parties in the development and implementation of the framework to ensure that it is effective and sustainable.
