Interchangeability of vaccines (vaccine mixing)

Interchangeability of vaccines (vaccine mixing)

Policy positions and recommendations:
1. The Canadian Medical Association (CMA) recognizes the importance of vaccine interchangeability.
2. The CMA supports the principle of vaccine interchangeability, recognizing that it is a key component of equitable and efficient vaccination programs.
3. The CMA encourages health care providers to have policies in place to facilitate vaccine interchangeability.

Interchangeability of vaccines

- The interchangeability of vaccines is the ability of different vaccines to be used interchangeably in the same patient, without compromising the safety or efficacy of the vaccination.
- The interchangeability of vaccines is essential to ensure that vaccination programs are efficient and effective, and that patients have access to the vaccines they need.
- The interchangeability of vaccines is particularly important in situations where vaccines are in short supply or where there are changes in vaccine formulations.

Interchangeability of vaccines is supported by evidence from clinical trials and real-world data.

Implications of vaccine interchangeability

- Vaccine interchangeability can help to ensure that vaccination programs are equitable and efficient.
- Vaccine interchangeability can help to ensure that patients have access to the vaccines they need.
- Vaccine interchangeability can help to ensure that vaccination programs are effective.

The CMA supports the principle of vaccine interchangeability, recognizing that it is a key component of equitable and efficient vaccination programs.
