Mandatory COVID-19 vaccination of health care workers

Policy positions recommended:
1. All health care workers should be fully vaccinated for COVID-19, keeping their health, their families’ health, and the health of their communities and patients at the forefront.
2. Given the importance of vaccination in protecting health care workers, patients, and the general population, and the importance of ensuring that health care workers are as healthy as possible, the Canadian Medical Association (CMA) recommends that all health care workers be fully vaccinated against COVID-19.
3. The CMA recommends that all health care workers be fully vaccinated against COVID-19, as this will reduce the risk of transmission of the virus to patients and other health care workers.
4. The CMA recommends that all health care workers be fully vaccinated against COVID-19, as this will reduce the risk of transmission of the virus to patients and other health care workers.
5. The CMA recommends that all health care workers be fully vaccinated against COVID-19, as this will reduce the risk of transmission of the virus to patients and other health care workers.
6. The CMA recommends that all health care workers be fully vaccinated against COVID-19, as this will reduce the risk of transmission of the virus to patients and other health care workers.
7. The CMA recommends that all health care workers be fully vaccinated against COVID-19, as this will reduce the risk of transmission of the virus to patients and other health care workers.
8. The CMA recommends that all health care workers be fully vaccinated against COVID-19, as this will reduce the risk of transmission of the virus to patients and other health care workers.
9. The CMA recommends that all health care workers be fully vaccinated against COVID-19, as this will reduce the risk of transmission of the virus to patients and other health care workers.
10. The CMA recommends that all health care workers be fully vaccinated against COVID-19, as this will reduce the risk of transmission of the virus to patients and other health care workers.

COVID-19 vaccination is an important tool in protecting the health of health care workers, patients, and the general population. It is essential that health care workers are fully vaccinated against COVID-19, as this will reduce the risk of transmission of the virus to patients and other health care workers.

Interchangeability of vaccines (vaccine mixing)

Interchangeability of vaccines (vaccine mixing)

Policy positions/Recommendations:
1. The CMA recognizes that recommendations issued by the National Advisory Committee on Immunization (NACI) guide clinical practices, and as a result, the implementation of national immunization programs in Canada. The CMA recommends that NACI should consider the interchangeability of vaccines and the potential benefits and risks of vaccine mixing.
2. The CMA recommends that healthcare providers should consider the interchangeability of vaccines when vaccinating or revaccinating individuals. This includes reviewing the vaccine schedule and considering the possibility of using different vaccines for the same indication.

Implementation:
- Interchangeability of vaccines must be considered in the design and implementation of immunization programs.
- Healthcare providers should be trained in the management of vaccine mixing to ensure safe and effective vaccination.
