Population health, health equity, public health

1. Vaccine coverage for children aged 5-11 years is not yet available in some countries, and the distribution of vaccines is uneven worldwide. The Global Vaccine Equity (GVE) initiative is a project aimed at promoting fair and equitable access to COVID-19 vaccines globally. It is a partnership between the World Health Organization (WHO) and the Coalition for Epidemic Preparedness Innovations (CEPI), which aims to ensure that everyone has access to COVID-19 vaccines within the next two years.

2. The GVE initiative is committed to achieving 50% coverage for all people in low-income countries by the end of 2022. The initiative is working with governments and international organizations to identify gaps in vaccine distribution and to develop strategies to fill these gaps. The GVE initiative is also working to increase the production of vaccines and to improve distribution mechanisms to ensure that vaccines reach the people who need them.

3. The GVE initiative is focused on ensuring that vaccines are available to people in low-income countries. The initiative is working with governments and international organizations to identify gaps in vaccine distribution and to develop strategies to fill these gaps. The GVE initiative is also working to increase the production of vaccines and to improve distribution mechanisms to ensure that vaccines reach the people who need them.

The recommendations will be developed in the form of a report for the House of Commons Standing Committee on Health. The report will be compiled from the recommendations of the Working Group, and will be presented to the Committee for consideration and endorsement. The report will be submitted to the House of Commons in the fall of 2021, as required.

The recommendations will be developed in consultation with all relevant stakeholders, including the provinces, territories, and the federal government. The recommendations will be presented to the House of Commons in the fall of 2021, as required.
