COVID-19 Vaccine Global Intellectual Property Policy

Publication recommendations:
1. The CMA encourages members to encourage companies in the global vaccine industry to make vaccines freely available and readily accessible to all those who need them. A global, equitable vaccine distribution system is essential.
2. The CMA urges governments to ensure access to vaccines for all people, including those in low-income countries, and to ensure that all vaccines are made available at affordable prices.
3. The CMA calls for a global moratorium on patents and intellectual property rights on vaccines.
4. The CMA supports the transfer of technology and know-how to other companies, and the sharing of intellectual property in order to increase vaccine production.

Interchangeability of vaccines (vaccine mixing)

For discussion purposes:
1. The Canadian Medical Association recommends that vaccination programs be conducted as a single-dose strategy when possible. When a single-dose strategy is not feasible, a mixed-dose strategy should be considered.
2. The mixed-dose strategy should be implemented in a way that maximizes patient safety and ensures that the vaccines used are appropriate and effective.
3. The CMA recommends that a mixed-dose strategy be used only when the single-dose strategy is not possible or feasible.

For information:
- The single-dose strategy is the preferred approach to vaccination.
- The mixed-dose strategy should be used only when the single-dose strategy is not possible or feasible.

For discussion purposes:
1. The CMA recommends that vaccination programs be conducted as a single-dose strategy when possible. When a single-dose strategy is not feasible, a mixed-dose strategy should be considered.
2. The mixed-dose strategy should be implemented in a way that maximizes patient safety and ensures that the vaccines used are appropriate and effective.
3. The CMA recommends that a mixed-dose strategy be used only when the single-dose strategy is not possible or feasible.

For information:
- The single-dose strategy is the preferred approach to vaccination.
- The mixed-dose strategy should be used only when the single-dose strategy is not possible or feasible.
