CMA Statement on the Governance of Health Information
A patient-partnered health information governance framework

WHAT IT IS
The purpose of this statement is to encourage the development of a patient-partnered health information governance framework that encompasses the principles of health information governance, promotes the responsible use of health information, and ensures that health information is protected and managed in a manner that respects the rights and interests of patients.

1. Health information is a valuable asset that should be protected and managed in a manner that respects the rights and interests of patients.
2. Health information governance is a process for the responsible use of health information that involves the participation of patients, health care providers, and other stakeholders.
3. The development of a patient-partnered health information governance framework should be guided by the principles of transparency, accountability, and protection of personal information.

The framework should include:

1. A governance structure that includes representatives from patients, health care providers, and other stakeholders.
2. A set of principles that guide the responsible use of health information.
3. A set of policies and procedures that ensure the protection of personal information.
4. A process for monitoring and evaluating the effectiveness of the governance framework.

The framework should be flexible and adaptable to the needs of different health care settings and should be reviewed and updated on a regular basis.
