ACTIVE TRANSPORTATION

This is a policy statement on the importance of active transportation. Active transportation is vital for promoting health and well-being, reducing the risk of chronic diseases, and increasing overall life expectancy. It is recommended that individuals engage in regular physical activity, such as walking, cycling, and other forms of active transportation, to maintain good health and reduce the risk of chronic diseases.

ADVANCE CARE PLANNING

MOTIVE

1. The intent of advance planning for the end of life, and as a result of the "Comprehensive End of Life Planning" tool developed by the Department of Health Canada, is to ensure that in the final moments of life a patient’s wishes are respected and that medical decisions are made in the best interest of the patient. To this end, it is essential that the patient, or a person authorized to act on their behalf, makes an informed decision that is in the best interest of the patient. The Department of Health Canada recognizes that these decisions are best made in the context of a comprehensive process that includes the patient, family, and healthcare providers.

2. The tool is designed to assist patients, families, and healthcare providers in the development of a comprehensive plan that respects the patient’s wishes and values. The tool includes a series of questions that help patients and families to reflect on their values, beliefs, and preferences regarding end-of-life care. The tool also provides information on available services and supports, as well as guidelines for making decisions about end-of-life care.

3. The tool is intended to be used as a guide, not as a substitute for professional advice. It is not intended to provide legal advice, and should not be used as a basis for legal decisions. The tool is not intended to be used in situations where legal advice is required.

TOOL

The tool is available online through the Department of Health Canada’s website. The tool is designed to be interactive and user-friendly, and can be accessed by patients and families at any time. The tool provides a step-by-step guide for patients and families to develop a comprehensive plan that respects the patient’s wishes and values. The tool includes sections on end-of-life care, advance care planning, and issues related to the end of life.

The tool is designed to be used in conjunction with healthcare providers, and should be used in conjunction with other resources available from the Department of Health Canada, as well as other organizations that provide support and information on end-of-life care.

Answering the Wake-up Call: CMA’s Public Health Action Plan

CMA submission to the National Advisory Committee on SARS and Public Health

June 2003

EXECUTIVE SUMMARY

The public health response to SARS was born out of the community values that led to the unprecedented public response to the Canadian Health Care System – a system that operated for the betterment of the health of all Canadians.

The Canadian Medical Association (CMA) has developed a framework to guide a national action plan for health care and patient safety. The framework is based on a five-year action plan that includes the following principles:

1. Strengthening public health capacity and integrating it into the health care system
2. Ensuring a national action plan for health care and patient safety
3. Achieving a culture of health care safety
4. Enhancing public health education
5. Establishing a national network for health care safety

The framework is designed to support the development of national action plans for health care and patient safety. The framework will be used to guide the development of the action plan and to ensure that it is responsive to the needs of all Canadians.

The framework will be used to guide the development of the action plan and to ensure that it is responsive to the needs of all Canadians.
