PRINCIPLES TO GUIDE HEALTH CARE TRANSFORMATION IN CANADA

PREFACE

Joint position statement: Principles to guide health care transformation in Canada

Health systems, system funding and performance

PRINCIPLES

The principles below were developed in response to the rising costs and demands on the health care system. These principles are intended to provide a framework for decision-making discussions and to guide and inform the development of relevant policies and programs. They are intended to provide a basis for improved health care outcomes, more efficient health care delivery, and the sustainable provision of health care services.

1. Patient-centred care: Patient-centred care is the foundation of high-quality health care. Patients should be involved in decision-making about their care and treatment. Healthcare providers should respect patients' autonomy and values.

2. Access to care: All Canadians should have access to quality health care services, regardless of their socio-economic status, location, or insurance status.

3. Quality of care: The quality of care provided to Canadians should be evaluated and improved continuously. Healthcare providers should continuously assess and improve the effectiveness and efficiency of their services.

4. Finance: The health care system should be financed through a combination of public and private funding sources.

5. Efficiency: The health care system should be designed to be efficient and effective in delivering health care services.

6. Innovation: The health care system should be innovative and responsive to new developments in science and technology.

7. Accountability: Healthcare providers and governments should be accountable to the public for the effectiveness and efficiency of their services.

8. Integration: The health care system should be designed to be integrated, with a focus on providing care that is continuous and coordinated.

9. Primary care: Primary care should be the foundation of the health care system, with a focus on preventive care and the management of chronic diseases.

10. Collaboration: Healthcare providers and government should work collaboratively to improve the health care system.

These principles are intended to guide decision-making discussions and to inform the development of relevant policies and programs. They are intended to provide a framework for improving health care outcomes, making health care services more efficient, and the sustainable provision of health care services.
