MANAGEMENT OF PHYSICIAN FATIGUE

Policy

Physician fatigue is an issue of significant concern to both the individual physician and the health system. It is a growing epidemic that is associated with adverse patient outcomes and increased costs to the health care system.

Physicians are exposed to high levels of stress due to the demands of the job and the increasing complexity of medical care. This fatigue can manifest in a variety of ways, including decreased performance, increased errors, and increased risk of burnout.

The CMA encourages the development of strategies to address physician fatigue, including the implementation of evidence-based practices to promote well-being and prevent burnout.

In conclusion, the management of physician fatigue is crucial to ensuring the health and well-being of physicians and the quality of care provided to patients.
