Addendum to the Council's pre-budget submission

December 2020

The Canadian Medical Association (CMA), pleased to provide this submission as part of its pre-budget submission to the Federal Government's Committee on Taxation, is pleased to submit the following addendum for consideration.

RECOMMENDATION 1

The government of Canada should implement a comprehensive reform of the tax system to ensure that it is fair, efficient, and supportive of the walk, walk, walk, walk, walk, walk approach.

RECOMMENDATION 2

The government of Canada should implement a comprehensive reform of the tax system to ensure that it is fair, efficient, and supportive of the walk, walk, walk, walk, walk, walk approach.

RECOMMENDATION 3

The government of Canada should implement a comprehensive reform of the tax system to ensure that it is fair, efficient, and supportive of the walk, walk, walk, walk, walk, walk approach.

RECOMMENDATION 4

The government of Canada should implement a comprehensive reform of the tax system to ensure that it is fair, efficient, and supportive of the walk, walk, walk, walk, walk, walk approach.

RECOMMENDATION 5

The government of Canada should implement a comprehensive reform of the tax system to ensure that it is fair, efficient, and supportive of the walk, walk, walk, walk, walk, walk approach.

Guiding Principles for the Optimal Use of Data Analytics by Physicians at the Point of Care

Executive Summary

Electronic health records (EHRs) are being used more widely in creating their own data. A majority of physicians in Canada have unstructured data in EHRs, which are being used to analyze patient outcomes and support evidence-based practice. EHRs can also provide data related to data analytics, which are applied to the design of electronic health records. Electronic health records are also used in the design of clinical trials and in the design of care pathways to improve patient outcomes. Electronic health records can also be used to support the design of care pathways and to support the design of care pathways that improve patient outcomes.

Electronic health records are used to improve patient outcomes and to support the design of care pathways. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes.

Electronic health records are used to improve patient outcomes and to support the design of care pathways. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes.

Electronic health records are used to improve patient outcomes and to support the design of care pathways. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes.

Electronic health records are used to improve patient outcomes and to support the design of care pathways. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes.

Electronic health records are used to improve patient outcomes and to support the design of care pathways. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes.

Electronic health records are used to improve patient outcomes and to support the design of care pathways. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes. Electronic health records are also used to support the design of care pathways and to support the design of care pathways that improve patient outcomes.
