A patient-partnered health information governance framework

WHAT IT IS

The purpose of this statement is to outline the development of a patient-partnered health information governance framework, to ensure the information exchanged between patients and providers is used to improve patient care, manage chronic conditions, enhance patient’s health and well-being, and improve the overall health system. The framework will provide a systematic approach to integrating patient perspectives into health information management, with a sustainable and scalable approach.

The framework is designed for implementation at the organization level, and it includes the following components:

1. Patient-driven governance: The framework is designed to support patient-driven governance, ensuring that patients are at the center of decision-making processes.
2. Data integration: The framework promotes the integration of data to support decision-making, ensuring that the information exchanged is meaningful and actionable.
3. Privacy and security: The framework ensures the privacy and security of health information, protecting patient data and ensuring compliance with health information management policies.
4. Stakeholder engagement: The framework involves stakeholders in the development and implementation of the framework, ensuring that the needs and perspectives of all stakeholders are considered.

The framework has been developed in collaboration with patient partners, organizations, and stakeholders in the health sector to ensure its relevance and applicability.

The framework is designed to support organizations in integrating patient perspectives into health information management, with a sustainable and scalable approach.
