What it is

The Foundation for the Code of Ethical Conduct and Professional Health is an evolving, comprehensive document that guides ethical conduct and professional health. It reflects the values, expectations, and responsibilities of physicians, and serves as a framework for addressing and managing ethical dilemmas in practice. It also provides guidance on managing health, well-being, and personal and professional conduct. The Foundation is intended to be consistent with the principles outlined in the CMA’s Code of Ethics and to support ethical decision-making in practice.

Why it matters

A greater understanding of physician health is critical to the well-being of patients and the health system. Maintaining the health of physicians is essential to ensure the highest quality of care for patients. Doctors of all ages, specialties, and practice settings face unique challenges that can affect their health and well-being. The Foundation for the Code of Ethical Conduct and Professional Health aims to provide guidance on how to identify and address these challenges, thereby promoting a culture of health and wellness among physicians.
