CMA POLICY

POSITION STATEMENT ON BODYCHECKING IN YOUTH ICE HOCKEY
This position statement is a result of the Canadian Federation of Students and the Canadian Medical Association's joint committee on bodychecking in youth hockey. The committee's goals were to promote bodychecking as a safe and effective means of protecting children and youth who participate in the sport. The evidence for bodychecking is based on a review of the literature in the areas of adolescent and child development, health and safety, and youth sport participation. The committee's work was supported by the Canadian Federation of Students and the Canadian Medical Association.

BODYCHECKING:

Bodychecking is defined as any action that involves physical contact with another player's body in an attempt to cause injury. The purpose of bodychecking is to protect the player from injury and to promote fair play. Bodychecking is a common occurrence in youth hockey and is encouraged by coaches and parents as a way to improve players' performance.

The evidence: Bodychecking can be harmful to players and may increase the risk of injury. Bodychecking can also lead to psychological harm, such as low self-esteem and a sense of inadequacy.

The committee recommends that bodychecking be limited in youth hockey and that coaches and parents emphasize safe, skill-based play. The committee also recommends that youth hockey organizations provide education on the risks and benefits of bodychecking and that they implement policies to address the issue.
