CMA POLICY

MEDICATION USE AND SENIORS

UPDATE 2017

The Canadian Medical Association supports the development of a comprehensive, long-term approach to medication use that examines the factors that influence prescription and non-prescription drug use.

The development of this approach should include the following areas:

1. The costs of medication use
2. The effectiveness of medication use
3. The potential for harm
4. The potential for benefit

The Canadian Medical Association recommends that the following principles be considered in the development of a comprehensive, long-term approach to medication use:

1. Medication use should be based on evidence-based practice.
2. Medication use should be safe and effective.
3. Medication use should be cost-effective.
4. Medication use should be accessible to all patients.
