Global vaccine equity

Policy position recommendation:

1. Canada, through its membership in the COVAX Facility, should work with international partners to ensure equitable access to COVID-19 vaccines.

2. Canada should support the development and equitable distribution of vaccines, especially in low-income and middle-income countries.

3. Canada should continue to support international efforts to ensure global vaccine equity, including participating in the COVAX Facility.

4. Canada should support efforts to increase vaccine production and distribution, especially in low-income and middle-income countries.

5. Increased global vaccine equity is essential to preventing the spread of COVID-19 and to protecting public health.

6. Canada should continue to advocate for global vaccine equity and support international efforts to ensure that all countries have access to safe and effective vaccines.
