PD08-01 Guidelines for Physicians in Interactions with Industry

TOPICS  
Ethics and medical professionalism

Guidelines for physicians in interactions with industry

See also companion policy, Recommendations for physician innovators.

Physicians are often approached in an undefined capacity to act in a fiduciary capacity, for example, by representing physician interests. The physician must ensure that the interactions are in the best interest of the patient. This policy outlines the standards and expectations for interactions between physicians and industry. The Guidelines for Physicians in Interactions with Industry will be revised as the landscape evolves in this area.

Recommendations for Physician Innovators

See also companion policy, Guidelines for Physicians in Interactions with Industry.

Physicians, as innovators and educators, are key actors in the medical field. Physician innovators can contribute to improvements in the delivery and quality of care by developing and deploying evidence-based interventions. Physicians have a responsibility to be aware of, and to critically appraise, new clinical research findings, and to integrate them into their practice. This policy aims to provide guidance for physicians who are innovators in research, teaching, and practice.
