Flexibility in Medical Training (Update 2009)

The Canadian Medical Association (CMA) advocates for the educational needs of medical students and residents in order to ensure a well-trained physician workforce. This policy provides a framework for education and training programs to develop equitable and efficient educational opportunities that are responsive to the needs of individual and community health. The CMA endorses the development and implementation of educational programs that provide opportunities for students and residents to learn in a variety of settings, including hospital-based programs, community-based programs, and clinical education settings.

The CMA believes that medical education should be accessible to all students and residents, regardless of their background or circumstances. To this end, the CMA advocates for policies that support the recruitment and retention of students and residents from diverse backgrounds, including those from underrepresented groups. The CMA also supports policies that promote the integration of community-based education into medical training programs, in order to ensure that medical graduates are prepared to practice in a manner that is responsive to the needs of patients and communities.
