Clinical Review

Editor's key points

A network, surgery and operation delivery programs provide clinically tailored and readily accessible services. The development of networks of specialists and non-specialists provides for the recruitment and retention of specialists in rural programs, supports the delivery of high-quality care, and provides for the recruitment and retention of specialists in rural programs. A network, surgery and operation delivery program provides clinically tailored and readily accessible services. The development of networks of specialists and non-specialists provides for the recruitment and retention of specialists in rural programs, supports the delivery of high-quality care, and provides for the recruitment and retention of specialists in rural programs.

Consensus statement on networks for high-quality rural anesthesia, surgery, and obstetric care in Canada

Summary The building relationships that are fundamental to successful networks are built through clinical coaching, ongoing professional development, and quality improvement. Conversely, a collaborative effort in which individuals, including a provincial program, build trust and clinical relationships built on the principles and supporting evidence described in this consensus statement.

Objective To describe the essential components of well-resourced and high-functioning multidisciplinary networks that support high-quality anesthesia, surgery, and obstetric care in rural Canada, wherever it is feasible to have as possible.

Composition of the committee A consensus statement group was formed from the Society of Obstetricians and Gynaecologists of Canada, the Society of Rural Physicians of Canada, the Royal College of Physicians and Surgeons of Canada, the Canadian Association of General Surgeons, the College of Family Physicians of Canada, and the Association of Canadian University Departments of Anesthesia.

Methods A collaborative effort over the past several years among the professional organizations has culminated in this consensus statement on network care designed to inform and support a specialized and coordinated, urban and rural, anesthesia, surgery, and obstetric care in high-functioning networks based on the best available evidence.

Report Surgical and obstetric surgery needs to be established within networks to address the barriers between rural/rural programs and local access to care. Safety and quality needs to be recognized for the environment, access and patient and provider, regardless of network size. Triage of patients across multiple sites in a quality customer service environment. Address existing clinical coaching between rural and regional centers can be helpful in building and sustaining high-functioning networks. Maintenance of quality and the provision of continuing professional development in rural/rural settings represent a mutual care proposition.

Conclusion The building relationships that are fundamental to successful networks are built through clinical coaching, ongoing professional development, and quality improvement. Conversely, a collaborative effort in which individuals, including a provincial program, build trust and clinical relationships built on the principles and supporting evidence described in this consensus statement.
