Executive Summary

CMA commends the federal government for taking this important first step that begins the debate on privacy and the protection of personal information. The issues are complex and the stakes are high. CMA welcomes the opportunity to provide comments on Bill C-6 and hopes that its input will strengthen the Bill by ensuring that patient privacy and the confidentiality of medical records are adequately protected.

CMA's chief concern with Bill C-6 is the inadequacy of its provisions to protect the right of privacy of patients and the confidentiality of their health information. The right of privacy encompasses both the right to keep information about oneself to oneself if so wished and to exercise control over what subsequently happens to information so critical to trust for the purposes of receiving health care. In recent years, this right and the ability of physicians to guarantee meaningful confidentiality, have become increasingly threatened.

Computerization of health information facilitates easy transfer, duplication, linkage and consolidation of health information. Copied in electronic form, patient information is potentially more useful for the purposes of providing care. However, this captured, it also becomes much more valuable and technically accessible to various third parties - private and public, governmental and commercial - wishing to use the information for other purposes unrelated to providing direct care. An additional concern is that the demand for health information, referred to by some commentators as "data lust", is growing, partly as a consequence of "information hungry" policy trends such as population health. There is also a disturbing tendency toward "function creep", whereby information collected for one purpose is used for another, often without consent or even knowledge of the individual concerned and without public knowledge or scrutiny.

Furthermore, litigation concerning health information technology tends to be dominated by those who seek access to this information for secondary purposes. From this perspective, privacy may appear less as a fundamental right than as a hindrance or even roadblock. As we move further into the information age there is some danger that we will become so spell-bound by the promise of information centralization and database linkages that we lose sight
