Documents

The screenshot shows the top portion of a policy document. At the top, there are logos for the 'ASSOCIATION MÉDICALE CANADIENNE' and 'CANADIAN MEDICAL ASSOCIATION'. Below the logos is the text 'CMA POLICY'. The main title of the document is 'Disclosure of COVID-19 Vaccination Status by Physicians'. Underneath the title, there is a section for 'Policy position recommendation' with two numbered points. The first point states that the CMA strongly encourages physicians to voluntarily disclose their vaccine status to their patients to allow them to make an informed decision. The second point states that the CMA continues to call for mandatory vaccination of all health care workers to protect themselves, their families, communities, and those in their care. Below this is a section for 'Rationale' with three bullet points. The first bullet point discusses the question of mandatory disclosure of vaccination status, noting the conflict between a physician's duty to care and a patient's right to privacy. The second bullet point states that when there are competing duties, the objective is to prevent compromising either duty, and that this can be achieved by encouraging voluntary disclosure. The third bullet point states that there is no substantive patient right to know their physician's health status, including vaccination status, and that currently, healthcare workers are not legally obligated to disclose their vaccination status to their patients.

ASSOCIATION MÉDICALE CANADIENNE CANADIAN MEDICAL ASSOCIATION

CMA POLICY

Disclosure of COVID-19 Vaccination Status by Physicians

Policy position recommendation

1. The CMA strongly encourages physicians to voluntarily disclose their vaccine status to their patients to allow patients to make an informed decision about their care and bolster vaccine acceptance.
2. The CMA continues to call for mandatory vaccination of all health care workers to protect themselves, their families, communities, and those in their care.

A. Rationale

- The question of mandatory disclosure of vaccination status gives rise to two conflicting primary duties: 1) the duty to care owed to the patient by the physician – and, if relevant, by the institution in which they work – to act in the patient's best interest and 2) the duty owed to the physician by their institution and regulator to protect their right to keep their personal health information confidential and private. In short, it involves a weighing of a patient's right to know versus a physician's right to privacy.
- When there are competing duties, the objective is to prevent compromising either duty. This can be best achieved by encouraging voluntary disclosure so that physicians are not obligated to share their personal health information with regards to their vaccination status with patients and instituting mechanisms that significantly minimize potential harm to patients by unvaccinated physicians through regulatory and institutional measures, such as vaccine mandates, and ensure that participating physicians and institutions are held accountable for their compliance.
- There is no substantive patient right to know their physician's health status, including vaccination status. Currently, healthcare workers are not legally obligated to disclose their vaccination status to their patients. This is primarily due to privacy rights, and the implications

Re: Federal measures to recognize the significant contributions of Canada's front-line health care workers during the COVID-19 pandemic

Dear Ministers Morneau and Hajdu:

On behalf of the Canadian Medical Association (CMA) and HEAL's member organizations, representing 450,000 health care workers in Canada, we are writing to you with recommendations for new federal measures to support the financial hardship and risks posed to front-line health care workers (FLHCW) during the COVID-19 pandemic.

To begin, we strongly support the measures the federal government has taken to date to mitigate the health and economic impacts of COVID-19. However, given the unique circumstances that FLHCWs face, additional measures are required to acknowledge their role, the risks being posed to themselves and their families, and the financial burden they have taken on through it. All FLHCWs face numerous challenges trying to carry out their life-saving work during these incredibly difficult times and they deserve to be recognized for their significant contributions.

In such, we are recommending that the federal government implement the following new measures for all FLHCWs:

- An income tax deduction for FLHCWs put at risk during the COVID-19 pandemic, in recognition of their heroic efforts.** All FLHCWs providing in-person patient care during the pandemic would be eligible for this new designated amount against their income earned. This would be included as the deduction provided to members of the Canadian Armed Forces serving in warlike and high-risk regions.
- A new legislation to support the families of FLHCWs who die in the course of responding to the COVID-19 pandemic or who die as a result of an occupational illness or psychological impairment related to the work.** The grant would also apply to cases in which the death of a FLHCW's family member is attributable to the FLHCW's work in responding to the pandemic. We are recommending that access to the Bereavement Grant program, via similar means, be granted to FLHCWs and their family members.
- A temporary emergency accommodation for deduction for FLHCWs who incur additional accommodation costs as well as a home renovation credit in recognition of the need for FLHCWs to adhere to social distancing to prevent the spread of COVID-19 to their family members.** We are recommending that FLHCWs receiving income while working in a health care facility or public health unit or in a capacity related thereto (e.g. paramedic or postal staff) be eligible for the deduction and credit.
